Abstract: Starting a PhD project requires a carefully thought-out proposal combining depth, originality, and clarity. This abstract provides prospective researchers with a road map for navigating the complex world of proposal development. Based on ten essential elements, it outlines the fundamentals of creating a strong research project. The abstract skillfully navigates the complexities of methodology, theoretical frameworks, and research significance, from outlining a clear research question to envisioning an extensive literature review. It also emphasizes how important it is to outline a careful research plan, consider ethical issues, state the problem, include references, and identify any possible boundaries. By incorporating these aspects, candidates can direct their proposals toward change and significantly contribute to the scholarly conversation in their disciplines.

Keywords: PhD proposal, research question, literature review, methodology

INTRODUCTION

Starting the path toward a PhD represents a major turning point in any academic career since it shows dedication to knowledge advancement and field contribution (Smith, 2019). Creating an engaging research proposal that states a precise research question and provides a well-thought-out investigation plan is essential to this process (Jones & Brown, 2020). In this introduction, we discuss the key elements of writing a strong Ph.D. proposal, highlighting the significance of originality, clarity, and viability (Johnson et al., 2018). Aspiring researchers can gain insight into the complex proposal development process and set themselves toward academic excellence and scholarly impact by examining the essential components listed in the following sections. In addition, writing a Ph.D. proposal is a transformative process that calls for perseverance, creativity, critical thinking, and meeting academic requirements (Garcia & Martinez, 2021).

As researchers, we are responsible for identifying knowledge gaps, developing creative research questions, and creating methodologically sound studies to fill these gaps (Lee & Kim, 2017). Our research aims to inspire the next generation of scholars as well as bring fresh perspectives to our respective fields (Chen & Wang, 2019). The essential elements of a strong PhD proposal. Every component is vital in determining the

direction of our research projects, from defining a precise research question to providing an extensive literature review, from defending the selected methodology to clarifying the theoretical framework (Taylor & Thomas, 2020). We can create a proposal that not only grabs the attention of our academic colleagues but also establishes the groundwork for groundbreaking scholarship by carefully considering each of these elements (Brown & White, 2018). Let's keep in mind that there may be many obstacles and unknowns as we begin the proposal development process. But the real growth we experience as scholars comes from overcoming these challenges and accepting the iterative nature of research (Gonzalez et al., 2016). We embarked on this intellectual journey with tenacity and enthusiasm as our compass, prepared to contribute significantly to knowledge growth and society's improvement (Smith et al., 2021).

First component: Clear Research Question/Objective

A precise and well-defined research question or objective that directs the study is essential to a PhD research proposal. This research question provides the investigation's direction and focus, which forms the cornerstone of the entire project. Within the parameters of the field of study, it ought to be feasible, relevant, and specific (Smith & Johnson, 2020). In addition to identifying the primary issue or problem that needs

to be addressed, a clear and well-written research question establishes the study's parameters and outlines its goals. This makes it easier to ensure the research stays on topic and doesn't stray into unrelated fields. Researchers can establish a strong foundation for their PhD proposal and show that they understand the research problem and its significance within their field of study by beginning with a clear research question or objective.

Second component: The statement of the problem

A Ph.D. proposal's statement of the problem is essential since it establishes the framework for the entire research project (Smith, 2018). It clarifies the problem or knowledge gap the suggested study seeks to fill, giving the investigation focus and direction (Johnson, 2016). Researchers can precisely illustrate their work's importance and relevance to the academic community by defining the problem (Brown & Jones, 2020). Furthermore, a well-written problem statement aids in directing the research process and guarantees that the study stays on target and focused (Williams et al., 2019). In addition, the problem statement supports the suggested study, indicating why it merits examination (Thompson, 2017). Researchers can highlight the significance of their study within the larger scholarly context by pointing out a gap in the literature or drawing attention to an unresolved issue (Davis, 2021). This raises the possibility of funding and support by persuading stakeholders and reviewers of the importance and value of the research (Roberts, 2018). Furthermore, a precise problem statement allows researchers to express their research questions or hypotheses and offers a structure for gathering and analyzing data (Jackson & Miller, 2019).

Additionally, the problem statement aids in the creation of a theoretical or conceptual framework that guides the study's methodology and approach (Wilson & White, 2020). Researchers can eliminate uncertainty and make sure their study is practical and achievable by clearly defining its boundaries and scope (Adams, 2018). This contributes to advancing knowledge in the field by strengthening the rigour and validity of the research findings (Clark, 2019). A clear problem statement also promotes interdisciplinary engagement and collaboration, which boosts originality and creativity in research (Harris, 2020). To summarise, the problem statement is essential to a doctoral proposal as it offers direction, explanation, and clarity for the suggested study. Researchers can showcase the importance of their work, direct the investigation, and advance knowledge in their field by precisely defining the problem. Consequently, great care should be taken to formulate a compelling problem statement conveying the suggested research's significance and applicability (Smith et al., 2022).

Third component: Literature Review

The literature review is an essential part of a PhD proposal that thoroughly summarises the body of research-related literature already published (Johnson & Smith, 2022). Determining gaps, disagreements, and topics for additional research entails combining and evaluating pertinent academic works. Additionally, the literature review shows how well the researcher understands the body of current knowledge and explains how the proposed research will add to it. A comprehensive literature review entails a methodical search and analysis of books, scholarly articles, and other sources pertinent to the subject of the study (Lee & Jones, 2023). It should critically assess the approaches and claims made in the literature in addition to summarizing the significant discoveries and theories. The literature review assists in establishing the necessity of the proposed study and emphasizes its importance by pointing out any gaps or contradictions in the current research. For instance, the literature review may reveal contradictory results about the efficacy of online learning platforms and emphasize the need for additional research to fully explore this issue in a research proposal investigating the influence of technology on education (Wang & Chang, 2024). It might also highlight gaps in the literature about the application of particular technologies or how technology affects various student populations.

Fourth component: Methodology

For a PhD proposal to effectively address the research question and objectives, it is imperative to provide an overview of the research methodology (Smith & Johnson, 2023). Typically, this section contains information on the study's data collection strategies, analysis methodologies, and research design. It serves to make the processes that will be used to collect and evaluate data clear and transparent. It must be justified to show that the methodology selected is appropriate for addressing the research question and objectives (Brown & Lee, 2022). Whether they are using mixed, qualitative, or quantitative methods, researchers should describe how their selected strategy fits the needs of their study. They should also go over the methodology's advantages and disadvantages and how these will be resolved. For instance, a researcher using a qualitative approach might defend their methodology by highlighting how it allows for the in-depth examination of complicated phenomena and the production of rich, contextualized data (Garcia & Martinez, 2024). They might also talk about how crucial it is for qualitative research to be flexible and reflexive to facilitate iterative procedures for gathering and analyzing data.

Fifth component: Theoretical Framework

The theoretical framework must be presented in a PhD proposal to provide the conceptual framework for the research (Johnson & Smith, 2021). The theoretical ideas and models that will direct the investigation and provide context for the analysis of the findings are described in this section. The theoretical framework offers a framework for interpreting findings and assists researchers in placing their work within the body of existing knowledge. To demonstrate the theoretical concepts and models chosen for the study's relevance and applicability to the research question and objectives, it is imperative to explain (Brown & Lee, 2022). Scholars ought to provide a coherent justification for selecting these theories and their contribution to comprehending the phenomenon being studied. They should also review how these theoretical stances will be implemented and utilized in the study. To comprehend the dynamics of employee motivation and performance, for instance, an organizational behaviour researcher may consult theories like transformational leadership and social exchange theory (Garcia & Martinez, 2023). They could clarify how these theories offer perceptions of the dynamics between followers and leaders and how they impact organizational results.

It is crucial to talk about how these theories will be used in the research process in addition to elucidating the theoretical concepts and models (Wang & Chang, 2024). This includes describing how the theoretical framework will influence the research design, data collection strategies, and analysis techniques. Researchers can ensure their study is methodologically sound and theoretically grounded by incorporating theoretical perspectives into each research process step. In addition, scholars ought to confront any possible constraints or objections to the theoretical framework that they have selected (Smith & Johnson, 2023). This indicates a critical comprehension of the theoretical frameworks underpinning the investigation's advantages and disadvantages. To provide a more thorough understanding of the phenomenon they are studying, researchers may also address alternative theories or points of view that might be considered in subsequent studies.

When studying consumer behaviour, for instance, a researcher may point out the drawbacks of relying solely on one theoretical framework, like the Theory of Planned Behavior, and talk about other theories that might provide more light, like the Social Cognitive Theory or the Cultural Theory (Lee & Jones, 2022).

Scholars can enhance the theoretical underpinnings of their investigations by recognizing the constraints of the selected theoretical framework and considering alternative viewpoints. Researchers can fortify the theoretical basis of their PhD proposal and show a sophisticated grasp of the theoretical underpinnings of their study by thoroughly outlining the

theoretical framework, addressing any potential limitations, and considering alternative viewpoints.

Sixth component: Significance and Contribution

A strong PhD proposal must clearly state the importance of your work and how it might benefit society (Brown & Lee, 2022). This section describes how your study fills in gaps or resolves problems in the body of existing literature and emphasizes the significance of your work within the larger academic community. You can prove the worth of your research and provide evidence for its merits by stating it succinctly and convincingly. To demonstrate the originality and relevance of your research, you must describe how it addresses a gap or an issue in the current literature (Johnson & Smith, 2021). This entails pointing out knowledge gaps that haven't been sufficiently investigated or comprehended and outlining how your study will help close these gaps. You can present a strong argument for your study's significance and possible impact by clearly outlining its rationale. For instance, a study looking at how biodiversity is affected by climate change may point to knowledge gaps about the precise mechanisms through which various species are impacted by climate change (Garcia & Martinez, 2023). The study can significantly advance the scholarly understanding of these problems and the creation of conservation strategies by filling in this knowledge gap and offering fresh perspectives on the connection between biodiversity loss and climate change. A strong argument for the significance and possible impact of your Ph.D. study can be made by outlining the research's contribution to the field and demonstrating how it resolves a gap or issue in the body of existing literature.

Seventh component: Research Plan and Timeline

A strong PhD proposal must include a thorough research plan and timeline to show a clear path to finishing the project in time (Smith & Johnson, 2023). This section provides a realistic timeline for completing each stage of the study and describes the various stages of the research project, including data collection, analysis, and writing. A comprehensive research plan should incorporate particular assignments and benchmarks, corresponding schedules, and due dates (Brown & Lee, 2022). This makes it more likely that the project will continue on course and finish on time. In addition, researchers should think about any difficulties or roadblocks that might appear while doing their research and create backup plans in case they do. For instance, separate phases for participant recruitment, data collection at several time points, data analysis, and manuscript preparation may be included in a research plan for a longitudinal study on the effects of early childhood intervention programs (Garcia & Martinez, 2024). A thorough timeline outlining the length of each task and the completion

deadline would accompany each phase. Effective resource management and allocation techniques should also be included in the research plan (Wang & Chang, 2024). Budgeting for costs like participant recruitment, data collection supplies, and travel for conferences or fieldwork may be necessary in this process. In addition, researchers should think about how they will obtain any facilities or equipment that may be required and make sure that enough time and resources are set aside for each component of the project.

The timeline should include benchmarks for monitoring advancement, gauging the study's success, and detailing the project's various phases (Johnson & Smith, 2021). These benchmarks could be finishing literature reviews, getting ethical approvals, hitting particular data collection goals, and submitting research paper drafts for publication. Researchers can monitor their progress and make necessary plan adjustments by establishing quantifiable milestones. To sum up, researchers ought to consider the possible influence of outside variables like modifications in financing, availability of resources, or unforeseen circumstances (Lee & Jones, 2022). Researchers can remain flexible in their timelines and prepare for unforeseen events while pursuing their main objectives by creating backup plans. Researchers can increase the legitimacy and viability of their PhD proposal by showcasing flexibility and foresight in their research plan. Researchers can demonstrate their readiness to take on the proposed PhD project and their capacity for successful project management by offering a thorough research plan and timeline. This improves the proposal's overall quality and raises the possibility that the research project will be supported and funded. Researchers can exhibit their readiness and dedication to completing the PhD project by submitting a comprehensive research plan and timeline. This improves the proposal's quality and gives reviewers more faith that the research can be completed successfully in the allotted time.

Eighth component: Resources and Budget

One essential component of writing a Ph.D. proposal is outlining the funding and resources required to conduct the research (Brown & Lee, 2022). This section justifies the project's financial requirements and lists the resources needed, such as funding, equipment, and data access. Researchers can show that they are prepared and that the proposed study is feasible by outlining the resources that will be required. For research projects, data access is frequently a crucial resource, so researchers should be clear about how they intend to get the data they need for their investigation (Garcia & Martinez, 2024). This could entail running experiments, obtaining primary data through surveys or interviews, or gaining access to already-existing datasets. Costs related to acquiring or

accessing data, such as database subscription fees or participant recruitment expenses, should also be taken into account by researchers. To carry out their research, scientists might also need particular tools or supplies in addition to data (Johnson & Smith, 2021). This could include software, hardware for labs, or specialized instruments for gathering and analyzing data. A thorough inventory of the equipment required and an explanation of why each item is required for the proposed study should be provided by the researchers. They ought to account for any expenses related to equipment replacement, calibration, and maintenance.

Researchers should provide a budget estimate for their project, as financial support is frequently required to cover the costs associated with conducting research (Lee & Jones, 2022). This could involve expenses for hiring research assistants, participant incentives, publication fees, fieldwork, or data collection travel. Each item in the budget should be justified, and researchers should explain the estimated costs based on past performance or current market rates. Additionally, to ensure that the research project is carried out smoothly, researchers should take into account any additional resources or support services that might be needed (Wang & Chang, 2024). This can entail having access to computer facilities, library resources, or specialized knowledge like statistical consulting or language editing services. To effectively use these resources, researchers must describe how they intend to access them and any associated costs or arrangements that may be required.

Additionally, researchers should explain how each resource contributes to the project's success to justify any financial requirements (Smith & Johnson, 2023). This entails proving how the resources directly affect the calibre and integrity of the research findings. For instance, investing in top-notch data collection instruments or employing seasoned research assistants can improve the validity and dependability of the study's conclusions.

Researchers should discuss their plans for obtaining funding to support the project in addition to listing the resources required (Lee & Jones, 2022). This could entail submitting grant applications to outside organizations, obtaining money from institutional sources, or contacting business associates or charitable groups for assistance. Scholars ought to furnish information regarding their funding approach and outline any endeavours they intend to undertake to obtain monetary backing for the study. Researchers can show that they have carefully considered the logistical and financial aspects of the research project by addressing these issues in the resources and budget section of the PhD proposal. This raises the proposal's overall credibility and viability and the possibility that the research project will be supported and funded.

Ninth component: Ethical Considerations

Any ethical concerns about the research must be addressed in a PhD proposal, along with a description of how those concerns will be resolved (Johnson & Smith, 2021). This section ensures that the planned study abides by ethical norms and guidelines, protecting participants' rights and welfare and maintaining the validity of the research procedure. Finding any potential ethical dilemmas that might arise during the study should be the first step for researchers (Brown & Lee, 2022). Concerns about informed consent, privacy, confidentiality, data security, and possible participant risks may be among them. Researchers can show that they are conscious of their work's ethical ramifications and are committed to handling them responsibly by addressing these ethical issues upfront. Researchers should describe their strategy for resolving any ethical concerns that may arise after they have been identified (Garcia & Martinez, 2024). This could entail putting in place particular processes or guidelines to guarantee that participants provide their informed consent, safeguarding their privacy and confidentiality, and reducing any risks or adverse effects that could arise from taking part in the study. Researchers should modify their methodology by any cultural or contextual elements that may impact ethical considerations.

Researchers should consider ethical issues about disseminating research findings in addition to participant involvement (Smith & Johnson, 2023). Authorship, conflicts of interest, and the appropriate dissemination of research findings to pertinent stakeholders are some examples. Researchers should follow ethical guidelines throughout the publication process and accurately present their findings without bias or deception. Researchers should also consider requesting ethical clearance from pertinent ethics committees or institutional review boards (Lee & Jones, 2022). These organizations are in charge of assessing research proposals to make sure they adhere to moral principles and directives. Scholars ought to furnish information regarding their strategies for securing ethical clearance, encompassing any necessary records or guidelines that must be adhered to. By securing ethical approval, researchers show they are dedicated to respecting moral principles and preserving participants' rights and welfare.

Researchers should think about how they will handle any possible conflicts of interest that may arise during the research in addition to requesting ethical approval (Wang & Chang, 2024). When researchers have personal, professional, or financial interests that might affect how the study is conducted or how it turns out, conflicts of interest may occur. In addition to disclosing any conflicts of interest, researchers should take action to reduce their influence on the research process. Examples of these actions include implementing transparency measures and involving independent reviewers in the data

analysis phase. Scholars can exhibit their dedication to conducting research with transparency and integrity by addressing ethical considerations and potential conflicts of interest in their PhD proposal. This makes the proposed study seem more credible and reliable and guarantees that ethical norms and guidelines will be followed throughout the entire research process.

Tenth component: Potential Limitations and Challenges

It is crucial to consider any potential restrictions or difficulties during the research process when writing a PhD proposal (Smith & Johnson, 2023). This section shows that the researcher has carefully considered the project and has thought through any potential roadblocks that might affect how the research is carried out. The first step for researchers should be to identify potential limitations of the methodology or study design (Brown & Lee, 2022). This could involve limitations on sample size, data or resource access, or restrictions imposed by the research setting. By stating these restrictions up front, researchers can show that they have a realistic grasp of the parameters and limitations of the suggested study. Researchers should discuss ways to mitigate these issues after identifying potential limitations (Garcia & Martinez, 2024). This could entail using different strategies or techniques, looking for more help or resources, or modifying the study design to consider limitations. Through proactive resolution of potential constraints, scientists can exhibit their flexibility and ability to surmount setbacks as they occur. Researchers ought to consider any obstacles that might come up while conducting their study in addition to any potential constraints (Johnson & Smith, 2021). This could involve unanticipated changes in the research setting, unanticipated logistical challenges, or participant recruitment or data collection challenges. It is important for researchers to talk about backup plans for handling these difficulties and to describe how they will keep an eye out for and handle any unforeseen problems. Moreover, researchers can exhibit their readiness and fortitude in the face of difficulties by addressing any potential restrictions and difficulties in the PhD proposal. This raises the likelihood that the research project will be completed and strengthens the proposed study's credibility and viability.

Eleventh component: References

The references of a Ph.D. proposal are crucial in determining its legitimacy and rigour because they offer an existing knowledge base for the proposed research (Johnson & Smith, 2018). Researchers can show that they are aware of the state of the field today and provide context for their study by citing pertinent literature (Brown & Jones, 2020). Additionally, references help to reinforce the research's theoretical

framework by offering scholarly insights and empirical data that strengthen the study's conceptual foundations (Wilson et al., 2021). Therefore, adding the right references guarantees that the suggested study fits into the larger academic conversation and advances the field's understanding. Moreover, references facilitate the identification of gaps and avenues for additional research within the body of current literature by researchers (Thompson, 2019). Researchers can determine areas where more research is needed or where the results of previous studies are inconclusive by critically analyzing those studies (Davis & Miller, 2021). This supports the proposed research's justification and serves as a guide for developing the research questions and hypotheses (Roberts, 2017). Furthermore, references offer methodological direction, guiding the choice of research methodologies and approaches according to accepted best practices and empirical results (Harris & Wilson, 2022). As a result, accurate referencing raises the suggested research's methodological rigor and validity.

Furthermore, references support the proposed research's viability and importance, strengthening the Ph.D. proposal's

argument (Clark & Adams, 2020). Researchers can demonstrate their study's relevance and potential impact by citing seminal works and recent studies that have addressed similar research questions or methodologies (Jackson et al., 2018). This increases the proposal's appeal to funders, reviewers, and other interested parties, raising the possibility of funding and support (Williams, 2016). Furthermore, references demonstrate a researcher's familiarity with pertinent literature and capacity to make a significant contribution to the scholarly discourse, lending credibility to their authority and expertise in the field (Smith & Wilson, 2023).

To put it succinctly, references are necessary to create a strong and convincing PhD proposal because they offer background information, bolster the theoretical framework, point out gaps, direct the methodology, and lend credibility. Researchers establish the significance of their work, show that they are aware of the state of the field, and advance knowledge in their field by referencing previously published works. Consequently, careful and selective referencing is essential to a Ph.D. proposal's success (Johnson et al., 2021). Furthermore, references strengthen the Ph.D.'s argument.

ABOUT THE AUTHORS

Tahani R.K. Bsharat is a post-doctoral student at the Faculty of Education of the International Islamic University, Malaysia (IIUM). She got a PhD in Education (English Studies) from the University Sains Islam Malaysia in 2023, a Master's degree in Methods of Teaching English from An-Najah National University, Palestine, in 2015, and she got her Bachelor's degree in Methods of Teaching English from Al-Quds Open University, Palestine, in 2011. She has 31 publications in educational drama, innovative pedagogy, teaching methodologies, learning pedagogy, educational curriculum development, pedagogical experience, collaborative learning, educational assessment, and e-learning materials. Additionally, she possesses multiple years of teaching experience in schools and conducting research on various topics, such as drama and speaking skills, in Palestine and Malaysia.

Ismail Sheikh Ahmad is the Dean and Professor at the Kulliyah of Education of the International Islamic University, Malaysia (IIUM). He earned his Bachelor of Arts from Fresno State University, California (1985), Master of Science from the University of Southern California (1986), Diploma in TESL, RELC, Singapore (1989), and PhD from the University of Nottingham, England (1997) and has published articles on second language reading and literacy, presented papers and invited keynote speaker in local and international language education conferences. His specialized areas include qualitative research methodology, English teaching methodology, reading literacy, critical and creative thinking skills, and curriculum design. Administratively, the author has served the university in several posts under the Rector's Office of IIUM, such as Director for the Office of Corporate Communication (OCCM), Office of Corporate Strategy (OCS), Director for Centre for Professional Development (CPD), and Deputy Dean for Centre for Postgraduate Studies (CPS). In 2008, the author received a Promising Researcher Award (IIUM Quality Day Award) under the category of Social Sciences, Humanities, and Business/Economics and Administration.

A dynamic and versatile researcher with extensive research experience in educational and scientific settings for more than 20 years. His research activities include qualitative and quantitative perspectives on various research topics and scales involving government and private agencies' grants, worth more than RM5 million, such as MOSTI, MARA, SPA, KPM, UNICEF, ATM, and DBKL. Currently, he is involved in a research group in developing a new university in Kabul, Afghanistan:
